

INDIA TRADE OVERSEAS

WHERE QUALITY MEETS GLOBAL DEMAND

MASTER DETAILED PROJECT REPORT

Qualified Traffic • Soft-Gate Lead Capture • Tracking • CRM • Conversion • Digital Sales

Prepared for Management, IT, Marketing, Sales & Operations

Version 4.0 • September 2026

PROJECT MANDATE

Executive Summary

India Trade Overseas requires a measurable B2B customer-acquisition system in which advertising does not end at a website click. The target operating model is: qualified traffic → product-specific landing experience → requirement capture → value-based soft gate → identified lead → CRM → qualification → quotation → order → revenue → repeat business.

CRITICAL CLARIFICATION

No legitimate website or advertising system can guarantee that 100% of visitors will submit personal details or buy. This DPR instead defines a 100%-testable technical standard: every successful lead submission must be persisted, attributed, routed, auditable and recoverable; campaign scaling is prohibited until end-to-end QA passes.

The current live website already has a strong B2B positioning, multiple product verticals, a commercial enquiry process and visible trust markers. The key conversion weakness is that the Stone experience asks for Full Name, Email, Phone, City and State before presenting substantive product value. The general contact and quote forms are also heavy for cold paid traffic. The proposed architecture keeps the premium institutional brand while replacing early hard gating with progressive qualification and a commercial-value soft gate.

Workstream	Current state	Target state	Priority
Paid traffic	Can reach broad/generic destinations	Product + geography + intent matched landing pages	P0
Stone page	Identity gate before product value	Public product proof + requirement builder + soft gate	P0
Tracking	GTM is visibly embedded; deeper setup not proven by crawl	GA4 + Meta Pixel + CAPI + first-party attribution + QA	P0
Lead capture	Large forms	Phone-first progressive capture, then business details	P0
CRM	Not verifiable from public crawl	Persistent lead store + CRM sync + retry queue + scoring	P0
Services architecture	/our-services duplicates homepage content	True service hub with dedicated commercial pages	P0
Sales reporting	Not visible publicly	Lead status → quote → order → revenue	P1
Digital ordering	Limited	Quotation, customer portal, reorder, eventual self-service	P2

WEBSITE REVIEW

1. Current Live Website Audit

The live homepage positions India Trade Overseas as a B2B sourcing, bulk supply and export company from India. It lists Agriculture, Stone, Coal, Industrial Materials, Consumer Products and Logistics; its process asks buyers to share product, quantity, destination and delivery requirement. The homepage also displays APEDA, DGFT, ISO, FSSAI, GST, IEC and MSME/UDYAM trust markers.

- Homepage H1 is commercially clear: B2B sourcing, bulk supply and export from India.
- The crawlable homepage contains the B2B Sourcing / Bulk Supply / Documentation Support / Logistics Coordination block twice; IT should remove duplicate rendering/content.
- The footer exposes Stone as a crawlable link while several other business verticals appear as button elements; strategic product pages should use normal crawlable anchor links.
- The live Stone page opens with an identity gate asking Full Name, Email, Phone, City and State before useful product detail.
- The current Contact page asks buyer type, contact person, company, email, mobile/WhatsApp, product/service, quantity, destination, required-by date, specification, payment terms and commercial requirement—good for serious corporate intake, too heavy as the first conversion step for cold paid traffic.
- The current Request a Quote page asks Full Name, Company, Phone/WhatsApp, Email, Product/Service, Quantity/Volume, Destination and additional requirements—appropriate for high-intent quote requests, not the only lead-capture mechanism.
- The /our-services route currently serves essentially the same content as the homepage and should be rebuilt as a genuine services hub.
- Google Tag Manager is visibly embedded on audited pages; public crawl alone cannot verify whether GA4, Meta Pixel, Conversions API, event mapping, deduplication and CRM attribution are correctly configured.

P0 DECISION

Do not scale another major Stone traffic campaign into the existing entry gate. Keep the brand. Rebuild the paid-traffic conversion path.

BRANDING

2. India Trade Overseas Brand System

The acquisition system must look and feel like the same India Trade Overseas organization as the corporate website. Conversion pages should be faster and clearer than the main site, but should not look like a third-party lead form.

Brand element	Specification	Usage rule
Primary name	INDIA TRADE OVERSEAS	Use full name on first brand occurrence.
Tagline	Where Quality Meets Global Demand	Use as corporate lock-up / footer line; do not repeat on every section.
Brand character	Institutional, premium, international, dependable, commercially precise	Avoid exaggerated luxury language.
Primary dark	Near-black #111214	Headers, navigation, high-value panels.
Secondary dark	Charcoal #202226	Cards, panels, footer.

Brand element	Specification	Usage rule
Accent	Warm gold #C7A24A	CTAs, rules, priority indicators, key numerals.
Background	Warm off-white #F7F4ED	Long-form content and forms.
Neutral	Grey #6A6D72	Secondary copy, labels, metadata.
Photography	Real source/product/loading/dispatch/packaging/office evidence	Operational proof outranks generic stock imagery.
Typography	Modern sans-serif; bold uppercase for major commercial headings	Readability before visual effect.
Motion	Subtle, fast, purposeful	No cinematic intro that delays product/CTA.

2.1 Brand Voice

- Write in direct commercial English: product, quantity, destination, availability, quotation, dispatch, delivery.
- Avoid unnecessarily futuristic or legalistic phrases on customer-facing pages.
- Never overstate certifications, availability, delivery commitments, pricing or market reach.
- Use confidence without hype: 'Bulk commercial supply' is better than 'revolutionary world-class procurement ecosystem'.
- Use one primary CTA per conversion section.

COMMERCIAL OUTCOMES

3. Project Objectives and Success Criteria

Objective	Primary KPI	Management question
Qualified traffic	Cost per qualified lead	Are we buying buyer intent, not curiosity?
Lead capture	Lead rate and valid-contact rate	Are high-intent visitors identifying themselves?
Qualification	Qualified-lead %	Do leads meet product, quantity, location and timing criteria?
Sales	Quote rate and win rate	Does the pipeline convert?
Finance	CAC, revenue, gross profit	Is acquisition economically sustainable?
Retention	Repeat order rate	Are digital leads becoming durable customers?

Clicks, CTR, reach and page views remain diagnostic metrics. They are not final success metrics.

TRAFFIC ACQUISITION

4. How to Bring Qualified Traffic

4.1 Commercial market selection

Before Marketing buys traffic, Operations must define where ITO can serve competitively. For freight-sensitive categories such as Stone, targeting must be based on product economics rather than audience size alone.

Field	Required input
Product	e.g., 20mm stone
Source	Bhutan / Pakur / other verified source
Target market	City / district / corridor
Minimum commercial quantity	Actual operating MOQ
Material economics	Current working cost range
Freight economics	Route-specific estimate / approved band
Expected selling range	Subject to commercial confirmation
Margin band	Internal
Delivery capability	Available / constrained / not supported
Priority	A Scale / B Test / C Limited / D Do Not Advertise

4.2 Ad-level self-qualification

Ads should state the actual product, buyer type, commercial context and location. This intentionally reduces low-intent clicks.

EXAMPLE STONE AD

20MM STONE — BULK COMMERCIAL SUPPLY

Bhutan / Pakur sourcing • For contractors, traders & infrastructure buyers • Check today's price & availability.

4.3 Channel role

Channel	Best use	Primary KPI
Meta Ads	Demand generation, visual proof, remarketing, lead capture	Qualified lead / order
Google Search	High-intent demand capture	Qualified lead / quote
SEO	Compounding commercial-intent acquisition	Organic qualified leads
WhatsApp	Continuation, rapid commercial conversation	Qualified conversation
CRM / Email	Nurture, reactivation, repeat purchase	Reactivated / repeat revenue

CONVERSION DESIGN

5. Paid-Traffic Landing Page Architecture

Do not send product advertisements to a generic homepage. Each campaign should land on a page that matches the product, geography and promise in the advertisement.

Advertisement	Destination experience
20mm Stone — Purnia	20mm Stone page / Purnia-compatible commercial flow
Bhutan Stone	Bhutan Stone page
Bulk Rice	Rice commercial page
Bulk Tea	Tea commercial page
ITO Ads lead generation	ITO Ads lead-generation page

5.1 Five-second test

- WHAT is being supplied?
- WHO is it for?
- WHERE can it be supplied / what market is being addressed?
- WHY should the buyer trust ITO?
- WHAT should the buyer do next?

5.2 Recommended section order

1. Hero with exact product promise and one primary CTA.
2. Real product / source / dispatch evidence.
3. Key commercial specifications and buyer-fit information.
4. Available grades, sizes or varieties.
5. Supply process and logistics capability.
6. Trust and compliance evidence.
7. Requirement builder.
8. Value-based soft gate.
9. FAQs and commercial notes.
10. Secondary contact/WhatsApp option.

LEAD CAPTURE

6. The Soft-Gate System

CORE RULE

Do not gate product knowledge. Gate personalized commercial value.

The soft gate should appear only after the buyer has selected enough requirement information to understand the benefit of identification. The buyer should feel that they are using a commercial tool, not being interrogated by a form.

6.1 Stone requirement builder

Step	Customer question	Captured value	Event
1	Which material do you need?	10mm / 20mm / 40mm / Dust / WMM	select_product
2	How much do you need?	1 truck / 2-5 / 6-10 / 10+ / custom	select_quantity
3	Where do you need delivery?	City + PIN	enter_destination
4	When do you need it?	Immediate / 3 / 7 / 15 days / future	select_timeline
5	Commercial eligibility	Supported / manual review / unsupported	eligibility_checked
6	Get current price & availability	Phone / WhatsApp + consent	submit_phone

6.2 Exact soft-gate copy

CUSTOMER-FACING COPY

YOUR REQUIREMENT

20mm Stone • 5 Trucks • Purnia • Within 7 Days

Get current commercial price & availability

Mobile / WhatsApp Number*

[_____]

☐ I agree to be contacted by India Trade Overseas regarding this commercial enquiry and acknowledge the Privacy Policy.

[GET CURRENT PRICE]

6.3 Progressive capture after phone

Immediately persist the lead after a valid phone submission. Only then ask for secondary details.

Stage	Fields	Mandatory?
Soft gate	Phone/WhatsApp; enquiry-contact consent	Yes
Step 2 profile	Name, Company, Email	Prefer optional / progressive unless business rule requires
Commercial qualification	GST, detailed specification, payment terms, documentation	Only when relevant
Transaction	Billing, shipping, statutory and	Only when order progresses

Stage	Fields	Mandatory?
	payment data	

6.4 When OTP should be used

Do not add OTP by default. Introduce it only if invalid/fake numbers materially damage sales efficiency. OTP improves contact validity but increases friction; test it as a separate optimization.

DYNAMIC FORMS

7. Product-Specific Qualification Flows

7.1 Stone

- Material/size
- Quantity or truck range
- Destination/PIN
- Required timeline
- Source preference if relevant
- Phone/WhatsApp
- Progressive company/GST/specification

7.2 Rice

- Variety/grade actually offered
- Quantity
- Packaging
- Domestic or export
- Destination/port
- Required timeline
- Phone/WhatsApp
- Progressive company/email/incoterm/quality requirement

7.3 Tea

- Tea type/grade
- Quantity
- Packaging
- Domestic/export
- Private-label requirement if offered
- Destination
- Timeline
- Phone/WhatsApp

7.4 ITO Ads

- Business category
- Target location
- Primary objective: leads/calls/WhatsApp/sales/awareness
- Monthly ad budget
- Current marketing status

- Phone
- Name/business name after lead capture

Do not reuse one generic form for every vertical. Each form should ask only questions needed to qualify that commercial category.

TECHNICAL MEASUREMENT

8. Measurement & Tracking Architecture

The audited pages visibly embed Google Tag Manager, but a public crawl cannot prove the presence or correctness of GA4, Meta Pixel, Meta Conversions API, consent configuration, deduplication, event mapping or CRM attribution. IT must verify these directly in the deployed environment.

Component	Role	Required outcome
Google Tag Manager	Controls tags/triggers and structured data-layer events	One governed container; tested events
GA4	Traffic and behavior analytics	Acquisition + funnel visibility
Meta Pixel	Browser-side Meta event signal	Website event measurement
Meta Conversions API	Server-side Meta event signal	More resilient event transmission where appropriate
First-party session store	Preserves campaign + journey context	Attach attribution to lead
CRM	Identity + sales lifecycle	Lead → quote → order
Management dashboard	Business reporting	Campaign → qualified lead → revenue

8.1 Canonical event dictionary

Event	Definition
landing_page_view	Paid landing page successfully viewed
view_product	Product content viewed
start_requirement	Requirement builder opened
select_product	Product/size selected
select_quantity	Quantity selected
enter_destination	Destination entered
select_timeline	Purchase timeline selected
eligibility_checked	Commercial rule evaluated
view_soft_gate	Contact gate displayed
submit_phone	Valid phone submitted
lead_created	Lead persisted in ITO backend
qualification_completed	Secondary details completed

Event	Definition
qualified_lead	Sales/business rules mark lead qualified
quote_created	Quotation prepared
quote_sent	Quotation issued
order_won	Opportunity won
purchase	Revenue event / completed order where defined
repeat_order	Existing customer reorders

8.2 Data-layer parameters

- product_vertical, product, variant/size/grade
- quantity_value or quantity_band
- destination_city, destination_state, destination_pin only where appropriate for first-party analytics design
- timeline
- landing_page_type
- utm_source, utm_medium, utm_campaign, utm_content
- campaign/ad/adset identifiers where available
- anonymous session identifier
- lead_id only in systems where policy permits; do not expose unnecessary personal information to analytics platforms

8.3 UTM standard

STANDARD

```
utm_source=facebook
utm_medium=paid_social
utm_campaign=stone_purnia_sep26
utm_content=20mm_video03
```

Google's current GA4 documentation recommends standardized UTM usage and notes that source, medium and campaign are core campaign parameters; naming is case-sensitive, so ITO should use one lowercase naming convention.

BACKEND RELIABILITY

9. Lead Persistence and Failure-Proof Delivery

The most valuable event in the funnel is a successful lead submission. It must not depend solely on a third-party CRM API being online.

11. Browser validates required fields.
12. Lead request reaches ITO backend API.
13. Backend validates and normalizes data.
14. Backend writes lead to ITO-controlled persistent database.
15. Backend generates immutable Lead ID.

16. Customer receives success state only after persistence succeeds.
17. CRM synchronization is queued asynchronously.
18. If CRM succeeds, record external CRM ID.
19. If CRM fails, retry automatically with exponential backoff.
20. If retries exceed threshold, alert IT and preserve the lead for manual recovery.

NON-NEGOTIABLE

No successfully persisted lead may disappear because CRM, WhatsApp, email or another third-party service is temporarily unavailable.

9.1 Required operational logs

- Lead API success/failure
- Database write outcome
- CRM sync outcome
- Retry count
- Notification outcome
- Quotation generation outcome
- Tracking dispatch status where available

Do not log passwords, raw payment credentials, API secrets or unnecessary personal data.

SALES OPERATIONS

10. CRM Data Model

Group	Fields
Identity	Lead ID, Contact ID, Name, Phone, WhatsApp, Email, Company, GST if provided
Requirement	Vertical, Product, Specification, Quantity, Unit, Destination, Timeline
Attribution	Source, Medium, Campaign, Ad Set, Ad, Creative, Landing Page, Session ID
Ownership	Assigned executive, territory, team
Status	New, Attempted, Contacted, Qualified, Quote Sent, Negotiation, Won, Lost
Commercial	Quote ID, Quote amount, expected margin band, order amount
Activity	Created time, first response time, last contact, next follow-up
Outcome	Won/Lost, reason, competitor/price/freight/timing notes

10.1 Duplicate management

Use normalized phone number and/or verified email as contact-resolution keys. The same person can have multiple opportunities. Example: one Stone enquiry and later a Rice enquiry should remain one contact with separate opportunities and attribution history.

10.2 Lead statuses

- NEW
- CONTACT ATTEMPTED
- CONTACTED
- QUALIFIED
- QUOTATION SENT
- NEGOTIATION
- WON
- LOST

10.3 Mandatory lost reasons

- Price
- Freight
- Competitor
- Unsupported destination
- Quantity too low
- Product unavailable
- No response
- Invalid contact
- Timing
- Payment terms
- Trust concern
- Other

QUALIFICATION

11. Lead Scoring

Start with a rule-based score, then recalibrate using actual won/lost data. Never assume the first weights are permanently correct.

Signal	Illustrative score
10+ trucks	+30
6–10 trucks	+25
2–5 trucks	+15
Immediate requirement	+20
Within 7 days	+15
Priority-A serviceable market	+20
Company provided	+5
GST/business verification provided	+5

Signal	Illustrative score
Completed price check	+10
Return visit	+5

Score	Classification	Action
80+	HOT	Immediate priority
60–79	WARM	Fast sales follow-up
40–59	NURTURE	Automated + scheduled follow-up
<40	LOW	Low-priority review / nurture

PAID SOCIAL

12. Meta Advertising Operating Model

For lead generation, campaign evaluation should center on leads, qualified leads and business outcomes—not click volume alone. Run a website conversion path and a Meta Instant Form path as controlled alternatives, then compare downstream quality.

Path	Journey	Use
Website	Ad → product landing page → requirement builder → soft gate → CRM	Higher context and qualification
Instant Form	Ad → Meta form → CRM → website/WhatsApp follow-up	Lower friction backup / comparison

12.1 Test matrix

- One product + one commercially strong market for the first controlled test.
- 3–5 distinct creatives: product proof, loading/dispatch proof, source proof, price/availability hook, corporate trust.
- Do not optimize decisions on CPC or CTR alone.
- Compare CPL, valid-contact rate, qualified-lead rate, cost per qualified lead, quote rate, order rate and gross-profit contribution.
- Exclude existing leads/customers from generic acquisition where appropriate; build separate nurture/reorder journeys.

AUDIENCE STRATEGY

13. Retargeting and Abandonment Recovery

Audience	Intent	Recommended message
Landing visitor	Low	Product/value education
Product viewer	Medium	Product proof + supply capability
Requirement starter	Medium-high	Continue requirement

Audience	Intent	Recommended message
Quantity + destination entered	High	Check current commercial price
Soft-gate abandoner	Very high	Complete price/availability request
Lead	Converted	Exclude from generic lead acquisition; move to sales/nurture
Customer	Existing	Reorder / relevant cross-sell

Audience creation and advertising use must follow applicable consent, privacy and platform requirements.

LEAD CONVERSION

14. Sales Execution and SLA

A qualified traffic system fails if Sales ignores or mishandles leads. CRM discipline is therefore part of the acquisition architecture.

Lead type	Priority	Required action
HOT	Highest	Immediate operational priority during working hours
WARM	High	Contact in defined same-day service window
NURTURE	Medium	Automated message + scheduled follow-up
LOW	Low	Review / nurture without crowding priority queue

- Every lead must have an owner.
- Every contact attempt must be logged.
- Every lead must move out of NEW.
- Every quote must have an amount and timestamp.
- Every lost opportunity must have a structured reason.
- Management must monitor lead response time and untouched hot leads.

REPORTING

15. Management Command Center

Layer	Metrics
Acquisition	Spend, impressions, clicks, landing-page views, CPC
Engagement	Product views, requirement starts, product/quantity/destination selections
Conversion	Soft-gate views, phone submissions, valid leads, lead rate
Qualification	Qualified leads, qualified-lead %, hot leads, cost per qualified lead

Layer	Metrics
Sales	Quotes, negotiations, won orders, win rate
Finance	Revenue, gross profit, CAC, marketing efficiency
Operations	Availability, freight, unsupported destinations, fulfillment constraints

15.1 Funnel diagnostic logic

Observed pattern	Likely area to investigate
Clicks high; landing views low	Page speed, accidental clicks, link issues, tracking
Landing views high; requirement starts low	Message match, trust, relevance, offer
Requirement starts high; soft-gate views low	Form friction / step complexity
Soft-gate views high; submissions low	Value exchange, trust, phone field, consent UX
Leads high; qualified low	Traffic quality / ad qualification / targeting
Qualified high; quotes low	Sales process / operational feasibility
Quotes high; wins low	Price, freight, trust, terms, competition

SEO + CONVERSION

16. Website Information Architecture

16.1 Homepage

21. Header
22. Hero
23. Trust / compliance strip
24. Main product divisions
25. Featured commercial products
26. Why ITO
27. How supply works
28. Operational evidence
29. Trade footprint
30. Commercial enquiry
31. Footer

16.2 Our Services

Rebuild /our-services as a genuine service hub rather than a duplicate homepage.

- B2B Sourcing & Procurement
- Bulk Commodity Supply
- Export Coordination
- Trade Documentation
- Quality Coordination

- Transport & Logistics
- Commercial Supply Management

16.3 Product page families

- Stone: Bhutan Stone, Pakur Stone, 10mm, 20mm, 40mm, Stone Dust, WMM.
- Agriculture: Rice, Tea, Spices and only genuinely supplied subcategories.
- Industrial: Coal, Dolomite and verified industrial materials.
- Consumer: Clay and ceramic products genuinely offered.
- ITO Ads: dedicated service architecture separate from commodity procurement.

Do not create thin city pages or mass keyword pages solely for search engines. Every page must provide real commercial value.

FORM GOVERNANCE

17. Contact and Quote Form Strategy

Keep the current detailed Contact and Quote forms for high-intent buyers, but add lighter entry paths.

Form	Purpose	Recommended entry fields
Quick enquiry	Cold / medium-intent visitor	Phone, product, city
Requirement builder	Paid traffic	Product, quantity, destination, timeline → phone
Commercial enquiry	Serious corporate buyer	Current detailed form
Export quote	FOB/CIF / institutional	Full quote-request form
Customer portal	Existing customer	Authenticated reorder / quote request

GOVERNANCE

18. Privacy, Consent and Security

- Publish and link a clear Privacy Policy at every personal-data capture point.
- Separate enquiry-contact permission from optional promotional marketing consent where required.
- Do not attempt to secretly identify anonymous visitors.
- Use HTTPS, server-side validation, rate limiting, CSRF protection, input sanitization and secure secret storage.
- Restrict CRM access by role; log administrative access and data exports.
- Maintain backups, retention rules and a documented incident-response procedure.
- Avoid transmitting prohibited or unnecessary personal data to advertising/analytics systems.

TESTING

19. Pre-Launch QA — Release Blockers

#	Release blocker
1	Correct product landing page loads from real ad URL
2	UTM parameters persist correctly

#	Release blocker
3	Mobile layout tested on Android and iPhone
4	Page speed acceptable on mobile network
5	Product content visible without gate
6	Requirement builder opens
7	Product selection event fires
8	Quantity selection event fires
9	Destination validation works
10	Timeline selection works
11	Eligibility logic works
12	Soft gate appears at correct moment
13	Consent wording and Privacy link work
14	Phone validation works
15	Lead is persisted before success message
16	Unique Lead ID generated
17	CRM sync succeeds
18	CRM outage retry tested
19	Sales notification succeeds
20	WhatsApp continuation works
21	GA4 events verified
22	Meta Pixel events verified
23	Meta CAPI events verified
24	Pixel/CAPI deduplication verified
25	Dashboard receives lead + attribution
26	Qualified-lead status works
27	Quote creation/status works
28	Won/Lost flow works
29	Lost reason is mandatory
30	Duplicate customer logic tested
31	Backup/recovery verified

DELIVERY PLAN

20. Implementation Roadmap

Phase	Scope	Exit criterion
0 — Freeze blind scaling	Do not send major spend into current Stone gate	Management approval
1 — Audit & tracking	GTM audit, GA4, Pixel, CAPI, UTM, consent	Test events verified
2 — Backend & CRM	Lead API, DB, queue, CRM, alerts	No lost-lead failure path
3 — Stone MVP	Public Stone content + builder + soft gate	End-to-end mobile QA passes
4 — Controlled campaign	One product + one market + multiple creatives	Real qualified leads observed
5 — Optimize	A/B tests + sales feedback	Acceptable CPQL / economics
6 — Rice & Tea	Dynamic product flows	Validated funnels
7 — Search & SEO	Commercial-intent pages and paid search	Qualified organic/search leads
8 — Quotation automation	Price/freight logic + PDF quote	Controlled production release
9 — Customer portal	Quotes, orders, documents, reorder	Existing-customer adoption

GOVERNANCE

21. Department Responsibility Matrix

Department	Owns
IT	Website, APIs, database, tracking, CRM integrations, security, reliability, dashboards
Marketing	Market/campaign structure, creative, UTM governance, CPQL, remarketing, experiment design
Sales	Lead contact, qualification, CRM hygiene, quote, negotiation, close, lost reason
Operations	Availability, source, freight, delivery feasibility, specifications, commercial constraints
Management	Budget, target markets, margin thresholds, SLAs, scale decisions, accountability

ACCEPTANCE CRITERIA

22. ITO '100% Workable' Engineering Standard

DEFINITION

100% workable does not mean every visitor converts. It means every defined system component is testable and reliable: successful lead submissions are persisted, attributed, routed or safely queued; critical events are verified; sales outcomes are recorded; and no major campaign is scaled while the funnel is technically blind.

- No silent lead loss.
- No serious paid campaign without tested attribution.
- No critical funnel step without an event definition.
- No lead without owner/status.
- No lost opportunity without reason.
- No scaling decision based solely on clicks or CTR.
- No paid product ad to a mismatched generic landing page.
- No mandatory identity gate before basic product value.
- No unverified claim of certification, price, stock or delivery.
- No release without end-to-end mobile QA.

PHASE II / III

23. Future Digital Commerce State

Once the lead and quotation engine is stable, ITO can move standard transactions toward self-service.

32. Customer selects product/specification.
33. Enters quantity and destination.
34. System calculates or requests current commercial price.
35. Customer identifies / signs in.
36. Quotation is generated.
37. Buyer accepts terms / submits PO.
38. Payment or approved credit workflow begins.
39. Order is created.
40. Dispatch and document status becomes visible.
41. Customer receives delivery updates.
42. Reorder is available from account history.

Human sales should remain available for negotiation, high-value orders, non-standard terms, export documentation, complex logistics and strategic accounts.

EVIDENCE

24. Source Notes & Current Audit References

Source	URL	Used for
ITO Homepage	https://www.indiatradeoverseas.com/	Audited live structure, verticals, trust markers, process, duplicated feature blocks, footer link behavior.

INDIA TRADE OVERSEAS

WHERE QUALITY MEETS GLOBAL DEMAND

FINAL OPERATING PRINCIPLE

Qualified Market → Qualified Ad → Matched Landing Page → Product Value →
Requirement Builder → Soft Gate → Persistent Lead → CRM → Qualified Lead →
Quotation → Order → Revenue → Better Data → Better Acquisition

Do not pay merely for clicks. Build a measurable commercial pipeline.
