SECTION 0

0. Executive decision

Management conclusion and immediate direction

FINAL VERDICT

The ITO Ads concept has a strong visual foundation, but the current live page is not safe for paid advertising. It should not receive further campaign traffic until reliability, real lead capture, CRM routing, attribution and performance are corrected.

3/10**CURRENT READINESS**

Public page audited on 7
September 2026

32+ MB**POTENTIAL PAGE
WEIGHT**

Driven mainly by a 30.9 MB
background video

0**REAL LEAD FORMS**

The primary contact action
opens a local FAQ assistant

10/10**TARGET**

Reliable, measurable and
supported by sales operations

Management decision required

- Pause paid traffic to the existing ITO Ads URL until Priority 0 defects are closed.
- Approve a conversion-first rebuild in which the page works without WebGL, animation or video.
- Replace every Connect Us action with a functioning form, WhatsApp contact and CRM workflow.
- Clarify service fees, media spend, GST, lead estimates, qualification rules and replacement terms before taking payment.
- Approve only real, verifiable proof such as case studies, dashboards and client testimonials.
- Restart campaigns only after end-to-end lead, attribution, CRM and payment testing passes.

10/10 DEFINITION

A 10/10 page is not merely attractive. It loads reliably, explains the offer, earns trust, captures the visitor, preserves campaign attribution, triggers disciplined follow-up and produces measurable qualified leads and sales.

SECTION 1

1. Report scope and methodology

What was examined and what remains subject to backend verification

Scope

- Live desktop rendering of <https://www.indiatradeoverseas.com/ito-ads>.
- Direct HTTP response, server-provided metadata, canonical and page content.
- Robots and sitemap discoverability.
- Deployed JavaScript, page component logic and publicly delivered asset sizes.
- Lead capture, chatbot, package selection and Razorpay initiation logic.
- GA4, Google Tag Manager and Meta Pixel presence in the live browser session.
- Conversion messaging, offer clarity, trust, brand consistency and sales readiness.
- Code-level responsive, accessibility and security indicators.

Important limitations

- No real payment was submitted and no external order was created during the audit.
- Private GTM, GA4, Meta Events Manager, CRM, payment dashboard and server logs were not accessed.
- Conversions API, server-side price validation and webhook security require internal verification.
- The blank-screen failure was reproduced in a live browser where WebGL was unavailable. Other devices may still display the page, but the failure path exists in deployed code.
- Business performance targets must be calibrated using clean campaign and sales data after tracking is repaired.

Evaluation principle

Recommendations are based on sales impact first: availability, clarity, trust, capture, follow-up and measurement take priority over animation and visual novelty.

SECTION 2

2. Current-state scorecard

Honest readiness assessment against the 10/10 target

Area	Current condition	Commercial consequence	Priority
Reliability	WebGL failure can remove the entire page.	Affected visitors cannot enquire or buy.	P0
Lead capture	No genuine enquiry form behind the main CTA.	Clicks leave no usable sales record.	P0
SEO	Server initially returns homepage metadata and content.	Conflicting canonical and fragile indexing.	P0
Tracking	Duplicate GTM; Meta Pixel not observed.	Campaign optimization and attribution are unreliable.	P0
Performance	30.9 MB video plus GPU simulation.	Slow mobile experience and higher bounce risk.	P0
Payment	Package click starts order flow before proper details.	Abandonment, incomplete billing and dispute risk.	P0
Trust	Strong promises without visible proof.	Prospects hesitate before enquiry or payment.	P1
Brand	ITO Ads, ITC and ITO identities vary.	Contracting and support responsibility are unclear.	P1

SECTION 3

3. Critical technical findings

Defects that can directly prevent revenue

3.1 Fatal WebGL dependency

The decorative fluid animation attempts to create a WebGL context and throws an unhandled error when no context is available. During the audit, the browser completed page loading but the rendered page contained no headings, links, buttons, images or forms.

BUSINESS IMPACT

For an affected visitor this is equivalent to a website outage: 100 percent bounce, no enquiry, no WhatsApp contact, no payment and possible loss of conversion telemetry.

Required engineering correction

- Remove the WebGL effect from the acquisition page, preferably.
- If retained, detect support before initialization and return a static visual when unavailable.
- Place decorative components behind an error boundary so business content cannot unmount.
- Handle graphics-context loss and stop work when the tab is inactive.
- Respect reduced-motion and data-saving preferences.
- Test with hardware acceleration disabled and on low-end Android devices.

3.2 Incorrect server-rendered route

The direct /ito-ads response initially contains India Trade Overseas homepage metadata, homepage canonical and homepage content. Client-side JavaScript later attempts to replace this with the intended ITO Ads page.

Element	Initial server response	Intended ITO Ads state
Title	India Trade Overseas trade/export title	ITO Ads lead-generation title
Description	Sourcing, supply and export	B2B advertising and lead generation
Canonical	Homepage /	/ito-ads
Body	ITO homepage	ITO Ads landing page

Done condition

A direct request without JavaScript must return the correct ITO Ads title, description, canonical, H1 and meaningful page content.

SECTION 4

4. Lead-capture and conversion defects

Why current traffic can fail to become a sales opportunity

4.1 Connect Us is not a contact action

The main CTA opens a keyword-based assistant with locally stored answers. It does not collect the visitor's identity, submit an enquiry, create a CRM lead, open WhatsApp, book a call or notify sales.

4.2 Package selection bypasses discovery

Selecting a package immediately initiates Razorpay order creation. The customer name, email and phone values are initialized as blank in the public page logic, and no complete commercial confirmation precedes checkout.

4.3 Missing trust sequence

The page asks a prospect to accept fixed lead volumes and proceed toward payment before showing verified results, agreeing qualification criteria, confirming media budget or identifying the legal billing entity.

Required conversion sequence

1. ATTRACT

Meta, Google, content

2. CAPTURE

Fast page and short form

3. QUALIFY

Fit, need, budget, timeline

4. RESPOND

CRM assignment in seconds

5. CONVERT

Consultation, proposal, payment

Every stage is tracked, owned and followed up.

PRIMARY RULE

Capture and qualify first. Build trust second. Present the commercial proposal third. Take payment only after scope, budget, terms and customer details are confirmed.

SECTION 5

5. The 10/10 landing-page blueprint

Recommended final information architecture and sales copy

5.1 Header

- ITO Ads logo with Powered by India Trade Center.
- Services, How It Works, Results, Packages and FAQ navigation.
- Visible WhatsApp action.
- Primary button: Get Free Campaign Plan.

5.2 Final hero copy

RECOMMENDED HEADLINE

Verified B2B Leads Delivered to Your Sales Team

ITO Ads plans, launches and optimizes targeted Meta and Google campaigns, conversion-focused landing pages and CRM-ready lead-generation systems for businesses across India.

Element	Recommended text
Primary CTA	Get Your Free Lead Plan
Secondary CTA	Chat on WhatsApp
Trust line	Transparent ad spend Agreed qualification criteria CRM-ready lead delivery
Support note	No payment required to request a campaign review

5.3 Required page sections

Order	Section	Purpose
01	Hero and CTA	Explain the result and capture intent immediately.
02	Trust strip	Show verified operating strengths without fabricated numbers.
03	Problems solved	Connect prospect pain to ITO Ads services.
04	Service system	Explain strategy, media, pages, validation, CRM and reporting.
05	Qualification definition	Show exactly what the client will receive.
06	Verified case studies	Prove performance using real data.
07	Packages	Separate service fee, media spend, GST and estimates.
08	Process	Explain discovery through optimization and reporting.
09	FAQ and policies	Resolve objections and commercial uncertainty.
10	Final form	Convert remaining interested visitors.

SECTION 6

6. Lead form and CRM specification

The minimum system required to turn a click into a follow-up

6.1 Recommended soft-gate form

Stage	Fields	System action
Step 1: Capture	Full name; phone/WhatsApp; business name; industry; city/state; objective	Create provisional CRM lead as soon as valid essential fields are submitted.
Step 2: Qualify	Target customer; geography; platform; budget range; required volume; website; callback time; plan	Enrich the same lead and calculate initial fit score.
Confirmation	Reference ID; expected response; WhatsApp option	Assign owner, send notification and start response timer.

6.2 Automatically captured attribution

- Unique lead ID and event ID.
- Timestamp, landing page and referrer.
- UTM source, medium, campaign, content and term.
- fbclid, fbp, fbc, gclid, wbraid and gbraid when available.
- Selected plan, form stage and landing-page version.
- Assigned sales executive and first-response deadline.

6.3 CRM statuses

Pipeline stage	Meaning
New	Lead received but not yet attempted.
Attempted	At least one contact attempt recorded.
Contacted	Two-way communication established.
Qualified	Need, fit, decision process, timeline and budget assessed.
Consultation booked	Discovery or strategy call scheduled.
Proposal sent	Commercial proposal delivered.
Payment pending	Approved scope awaiting payment.
Converted	Agreement and verified payment completed.
Follow-up	Genuine opportunity requiring future action.
Invalid / Duplicate	Excluded with documented reason.
Not interested	Closed after explicit rejection.

SECTION 7

7. Qualification and lead-replacement policy

Commercial definitions must be agreed before campaign launch

7.1 Recommended qualified-lead conditions

- Valid and contactable phone number.
- Correct person or business identity.
- Relevant product or service requirement.
- Within the agreed customer segment and geography.
- Genuine commercial interest.
- Relevant requirement, objective or purchase intent.
- Reasonable timeline and budget fit where required.
- Not already present as an excluded duplicate.

7.2 Eligible replacement reasons

- Invalid or disconnected phone number.
- Fake identity or demonstrably fabricated submission.
- Duplicate under the contract's stated lookback period.
- Wrong geography or business category compared with agreed targeting.
- Requirement unrelated to the campaign.

7.3 Policy caution

NON-RESPONSIVE DOES NOT ALWAYS MEAN INVALID

A genuine prospect who does not answer a salesperson is not automatically a bad advertising lead. The agreement should define contact attempts, evidence, dispute deadlines and excluded circumstances before promising replacement.

7.4 Lead temperature

Temperature	Recommended definition	Required action
Hot	Decision-maker or strong influencer; acceptable budget; ready within 30 days.	Immediate discovery and proposal priority.
Warm	Genuine need but later timeline, incomplete budget or pending approval.	Scheduled nurturing and follow-up.
Cold	Research stage, poor fit or no present commercial urgency.	Low-frequency nurturing or closure.
Invalid	Fake, irrelevant, duplicate or unusable contact.	Document evidence and apply policy.

SECTION 8

8. Package and pricing redesign

Clear commercial presentation that protects trust and margin

The existing page derives low per-lead figures from the service fee while media spend is separately excluded. That figure is not the customer's actual cost per lead and should not be presented without qualification.

$$\text{Actual Cost Per Qualified Lead} = (\text{Service Fee} + \text{Media Spend} + \text{Taxes}) / \text{Qualified Leads}$$

Plan	Service fee	Recommended positioning	Core deliverables
Starter	INR 5,000 / month	Initial campaign validation	One channel; one landing page; standard verification; CRM/email delivery; monthly summary.
Growth	INR 10,000 / month	Regular lead generation	Up to two channels; page testing; scoring; WhatsApp alerts; twice-monthly review.
Professional	INR 15,000 / month	Structured multi-channel growth	Meta and Google management; custom funnel; CRM webhook; advanced qualification; weekly reporting.
Scale	INR 20,000 / month	Regional or national expansion	Multiple segments; custom geography; dedicated manager; advanced routing; management reporting.

Mandatory package disclosures

- Media spend is additional and must be shown separately.
- GST and invoice treatment must be visible before checkout.
- Lead quantities are estimated unless a written category-specific guarantee exists.
- Platforms and campaign channels must be named.
- Creative, landing-page and ad-account ownership must be defined.
- Campaign preparation, reporting, renewal, cancellation and refund terms must be disclosed.

RECOMMENDATION

Do not promise identical fixed quantities such as 50, 125, 200 or 300 qualified leads across every industry. Establish a lead target after reviewing industry, geography, offer, budget, competition and qualification criteria.

SECTION 9

9. Trust and proof architecture

Evidence required before asking for a B2B commitment

9.1 Current trust gap

The page presents strong claims about qualification, CRM speed, BANT, deduplication, reporting and replacement without visible independent evidence or client results.

9.2 Required proof stack

- At least three genuine case studies.
- Real dashboard or weekly-report examples with confidential information removed.
- Client testimonials published with permission.
- Campaign and landing-page portfolio.
- Named team or founder introduction.
- Clear legal, GST, office and support information.
- Written service, replacement, cancellation and privacy policies.

9.3 Case-study template

Field	Required evidence
Industry and market	Actual client category and approved target geography.
Campaign period	Exact start and end date.
Media spend	Verified advertising spend.
Enquiries	Total form or contact submissions after deduplication.
Qualified leads	Count using the signed definition.
Cost per qualified lead	Service and media basis clearly disclosed.
Appointments or sales	Only if verified and client-approved.
Limitations	Seasonality, offer, geography or other material context.

INTEGRITY RULE

Never fabricate campaign numbers, customer logos, certifications, testimonials or partner badges. Evidence-based trust converts better and protects the company.

SECTION 10

10. Analytics, Meta Pixel and attribution

Measurement design for optimizing qualified leads instead of clicks

10.1 Observed state

- Google Tag Manager appeared twice in the live browser session.
- A Google Analytics-related script was present.
- Meta Pixel or fbevents.js was not observed in the tested session.
- No dependable completed lead flow was available for event verification.
- Conversions API and backend event logic require internal verification.

10.2 Required event map

Visitor action	GA4 event	Meta event	Trigger condition
Usable page rendered	page_view	PageView	Business content is visible, not merely HTML loaded.
Packages viewed	view_packages	ViewContent	Package section enters view.
Plan selected	select_plan	SelectPlan	Visitor selects a specific plan.
Form started	lead_form_start	LeadFormStart	First real field interaction.
CRM lead created	generate_lead	Lead	Server confirms valid lead creation.
WhatsApp clicked	contact_whatsapp	Contact	Outbound WhatsApp action.
Consultation booked	schedule_consultation	Schedule	Booking successfully confirmed.
Checkout opened	begin_checkout	InitiateCheckout	Validated customer begins payment.
Payment verified	purchase	Purchase	Server verifies successful transaction.

10.3 Pixel and CAPI deduplication

Browser Pixel and server Conversions API must use the same event_id for the same conversion. Lead should fire only after a valid CRM record exists, and Purchase only after server-side payment verification.

SECTION 11

11. Performance and engineering plan

Removing avoidable delay, failure and mobile-data cost

11.1 Observed public asset sizes

Asset	Approximate transfer	Assessment
Background video	30.9 MB	Critical and unsuitable for an acquisition page.
Logo image	460 KB	Far too large for a small header icon.
Main JavaScript	405 KB compressed	Heavy global application payload.
Vendor JavaScript	179 KB compressed	Material initial execution cost.
Recharts	90 KB compressed	Preloaded despite no visible page chart.
ITO Ads JavaScript	18 KB compressed	Page-specific bundle; WebGL logic is concentrated here.
Icons	12 KB compressed	Acceptable but should remain scoped.
Main CSS	32 KB compressed	Reasonable alone, but part of heavy total.
Initial HTML	121 KB	Includes incorrect homepage content.

11.2 Performance budget

Metric	Required target
Largest Contentful Paint	Below 2.5 seconds at the 75th percentile.
Interaction to Next Paint	Below 200 milliseconds at the 75th percentile.
Cumulative Layout Shift	Below 0.1 at the 75th percentile.
Initial mobile transfer	Below 1.5 to 2 MB.
Hero media	Below 1.5 MB; preferably below 750 KB on mobile.
Logo	Below 50 KB at rendered dimensions.
Initial compressed JavaScript	Preferably below 250 KB.

11.3 Required engineering actions

- Remove WebGL from the critical rendering path.
- Replace the 30.9 MB media with a compressed poster and optional optimized video.
- Use preload metadata or none instead of preload auto.
- Stop decorative media under reduced-motion and data-saving settings.
- Optimize and resize the logo.
- Remove unused Recharts preloading.
- Split login, CRM and customer-portal code away from the public landing page.
- Load Razorpay only after validated checkout intent.
- Apply long immutable caching to content-hashed assets.

SECTION 12

12. SEO and discoverability

Correct technical signals and commercial search intent

12.1 Recommended metadata

Element	Final recommendation
Title	B2B Lead Generation Agency in India ITO Ads
Description	ITO Ads helps businesses generate verified B2B leads through targeted Meta and Google campaigns, conversion pages, CRM routing and transparent reporting.
Canonical	https://www.indiatradeonseas.com/ito-ads
H1	Verified B2B Leads Delivered to Your Sales Team
Open Graph image	Dedicated branded image, 1200 x 630 pixels.

12.2 Technical SEO requirements

- Server-render correct ITO Ads content and metadata.
- Add accurate Service, FAQPage and BreadcrumbList structured data.
- Add internal links from Home, Our Services, About and the global footer.
- Create real case-study pages with descriptive internal links.
- Retain the sitemap entry and update modification data after deployment.
- Use Google Search Console URL Inspection after the route is corrected.
- Confirm the Google-selected canonical is /ito-ads.

SEO PRIORITY

Fix the initial server response before requesting indexing. Search Console cannot compensate for a route that initially declares the homepage as canonical.

SECTION 13

13. Brand, legal identity and governance

One brand experience with one accountable commercial identity

13.1 Recommended public format

BRAND ARCHITECTURE

ITO Ads | Powered by India Trade Center

The exact registered entity that signs contracts, receives payment and issues GST invoices must be disclosed separately and consistently in the commercial and legal footer.

13.2 Items to standardize

Identity item	Required decision
Brand	Use ITO Ads consistently across the service page.
Powered by	Use India Trade Center consistently if this is the approved relationship.
Contracting entity	State the exact legal person or entity responsible for the service.
Billing entity	Match Razorpay, GST invoice, agreement and payment policy.
Email	Choose one primary ITO Ads sales/support email.
Phone and WhatsApp	Choose one primary public number and one escalation number if required.
Address	Verify the full office address and spelling before publication.
Logo	Use the approved ITO Ads identity; retain ITO legal branding only where appropriate.

13.3 Required commercial documents

- Service agreement.
- Scope and deliverables schedule.
- Lead qualification and replacement policy.
- Media-spend and ad-account policy.
- Privacy policy and consent notice.
- Refund and cancellation policy.
- Payment and renewal terms.

SECTION 14

14. Payment-flow redesign

A controlled journey from package interest to verified onboarding

Recommended flow

1. Visitor selects a package.
2. A package summary explains fee, GST, media-spend exclusion and expected process.
3. Customer enters company, billing and contact details.
4. Customer accepts agreement and policies using an unchecked consent control.
5. CRM customer and opportunity are created.
6. The server calculates and validates the exact package amount.
7. Razorpay checkout opens.
8. The server verifies the payment signature and idempotency.
9. The system creates invoice, receipt, onboarding task and confirmation.

Security requirements

- Never trust the package price submitted by the browser.
- Verify Razorpay signatures exclusively on the server.
- Use idempotency to prevent duplicate processing.
- Apply input validation, sanitization and rate limiting.
- Log success, failure, cancellation and webhook discrepancies.
- Keep payment and API secrets out of frontend code.

CHECKOUT DECISION

For a consultative B2B service, the recommended default is discovery and proposal before payment. Self-service checkout should remain optional and should never replace qualification.

SECTION 15

15. Accessibility and security

Professional usability and baseline protection

15.1 Accessibility corrections

- Add a semantic main content region.
- Give the contact modal role dialog, aria-modal, labelled title and focus trapping.
- Provide real labels for form fields instead of relying on placeholders.
- Add aria-expanded and aria-controls to FAQ controls.
- Ensure all important text remains readable at 200 percent zoom.
- Use visible keyboard focus states and minimum practical touch targets.
- Support reduced-motion and pause decorative media.
- Test keyboard navigation, screen readers, Android accessibility and iOS VoiceOver.
- Target WCAG 2.2 AA.

15.2 Security posture

HTTPS and long-duration HSTS were observed. The public response did not show several other recommended protective headers.

Control	Recommended implementation
Content Security Policy	Restrict scripts, frames, connections, images and forms while allowing only required GA, GTM and Razorpay origins.
Clickjacking protection	Use CSP frame-ancestors and test payment integrations.
X-Content-Type-Options	Set nosniff.
Referrer-Policy	Use a policy appropriate for campaign attribution and privacy.
Permissions-Policy	Disable unnecessary camera, microphone, location and other capabilities.
Third-party scripts	Remove public-page scripts that are not required for acquisition.
Form endpoints	Rate limit, validate, deduplicate and monitor abuse.

SECTION 16

16. Sales follow-up operating procedure

A page generates opportunities; disciplined response converts them

16.1 Response sequence

Timing	Required action	Evidence
Immediately	Send acknowledgement and lead reference.	Automated message log.
Within 1 minute	Assign sales executive and notify owner.	CRM assignment timestamp.
Within 5 minutes	First call during working hours.	Call recording and disposition.
After missed call	Send a personalized WhatsApp message.	Message record or link.
Later same day	Second call and short value follow-up.	CRM task completion.
Next working day	Follow up with relevant question or proof.	Note and next action.
Day 3	Share approved case study or campaign plan.	Document link and response.
Day 7	Final structured active follow-up.	Disposition and nurture decision.

16.2 Discovery questions

- What does the business sell and what is the average customer value?
- Who is the ideal customer and which locations should be targeted?
- How are leads currently generated?
- What advertising has already been attempted and with what result?
- What is the monthly media budget?
- What outcome is required and by when?
- Who approves the campaign and payment?
- What qualifies as a commercially valuable lead?

16.3 Proposal contents

- Objective and target audience.
- Geography and platform plan.
- Offer, creative and landing-page approach.
- Service fee, media budget, GST and payment schedule.
- Expected test period and success measures.
- Qualification and replacement rules.
- Reporting, ownership and cancellation terms.

SECTION 17

17. Management KPI framework

Track commercial quality from visit to revenue

17.1 Website KPIs

- Usable page views, excluding blank or failed sessions.
- Form-start and form-completion rate.
- WhatsApp, call and consultation actions.
- Package-section view and plan-selection rate.
- Mobile versus desktop conversion.
- Page failure, load and performance metrics.

17.2 Lead and sales KPIs

KPI	Formula or definition	Why it matters
Valid lead rate	Valid leads / all submissions	Reveals traffic and form quality.
Contact rate	Two-way contacts / valid leads	Measures reachability and follow-up.
Qualified lead rate	Qualified leads / valid leads	Measures commercial fit.
Appointment rate	Appointments / qualified leads	Measures discovery conversion.
Proposal rate	Proposals / qualified leads	Measures sales readiness.
Close rate	Customers / qualified leads	Measures commercial performance.
CPQL	Service and media cost / qualified leads	Measures acquisition efficiency.
CAC	Total sales and marketing cost / customers	Measures cost to acquire revenue.
First response	Lead creation to first real attempt	Strong predictor of contact success.

17.3 Measurement rule

DO NOT OPTIMIZE FOR RAW CLICKS

Campaign decisions should be based on valid leads, qualified leads, appointments, proposals and sales. Establish the first clean baseline after tracking is repaired, then improve through controlled tests.

SECTION 18

18. Implementation roadmap

Ordered work plan with objective acceptance criteria

Phase 0 - Stop loss and restore the funnel

Workstream	Required action	Done when
Frontend	Remove fatal WebGL dependency and provide static fallback.	Page remains fully usable with WebGL unavailable.
Rendering	Serve correct ITO Ads HTML, metadata and canonical.	Direct source contains ITO Ads content.
Conversion	Replace Connect Us with form, WhatsApp and call actions.	Test enquiry reaches CRM with attribution.
Payment	Stop immediate order creation from package cards.	Checkout requires validated customer and scope.
Analytics	Remove duplicate GTM and implement the event plan.	GA4 and Meta test events pass without duplication.
Performance	Remove/compress video and optimize critical assets.	Performance budget and mobile tests pass.

Phase 1 - Establish trust and commercial clarity

- Publish accurate packages and disclosures.
- Approve qualification and replacement policy.
- Standardize brand, contracting entity and contact details.
- Publish genuine case studies and sample reporting.
- Add privacy, service, refund and cancellation terms.
- Complete payment, invoice and onboarding integration.

Phase 2 - Optimize using real evidence

- Run controlled campaign traffic only after all acceptance tests pass.
- Test headline, proof order, CTA and form length one variable at a time.
- Review performance by campaign, device, geography and lead quality.
- Use qualified leads and sales outcomes to guide budget allocation.
- Publish further verified results as evidence accumulates.

SECTION 19

19. Quality assurance matrix

Scenarios the IT and marketing teams must test

Test area	Scenario	Required result
Rendering	WebGL unavailable or blocked	Full page and form remain visible.
Rendering	Video fails or is disabled	Static design remains professional.
Mobile	Low-end Android and mobile data	Fast, stable layout with usable controls.
Mobile	iPhone Safari	No overflow, clipping or modal trap.
Accessibility	Keyboard and screen reader	All actions labelled, reachable and understandable.
Form	Valid submission	One CRM lead with correct attribution.
Form	Duplicate phone/email	Existing record updated or flagged, not duplicated blindly.
Form	Invalid input or bot attempt	Rejected safely with useful feedback.
Tracking	Lead submission	One GA4 and one deduplicated Meta Lead event.
Tracking	WhatsApp and call	Correct source and campaign preserved.
Payment	Success	Server verifies, invoice and onboarding created once.
Payment	Failure or cancellation	No false purchase and opportunity remains recoverable.
SEO	No-JavaScript fetch	Correct ITO Ads title, canonical, H1 and content.
Security	Header and CSP test	Protection active without breaking analytics or payment.

SECTION 20

20. Final go-live approval checklist

Paid traffic must not restart until every critical control is confirmed

Reliability

- [] Page works when WebGL is unavailable.
- [] Page works when video or animation fails.
- [] Actual Android and iPhone tests pass.
- [] Meaningful content is available before client-side JavaScript completes.

Lead capture and CRM

- [] Primary CTA opens a real form.
- [] Every test submission creates exactly one CRM record.
- [] UTM and click identifiers are retained.
- [] Sales notification, assignment and SLA timer work.
- [] WhatsApp and call actions are functional and tracked.

Analytics

- [] GTM loads once.
- [] GA4 receives tested events.
- [] Meta Pixel receives tested events.
- [] CAPI deduplication is confirmed.
- [] No false Lead or Purchase event occurs.

Commercial and payment

- [] Service fee, media spend, GST and lead estimates are clear.
- [] Customer and billing details are collected before payment.
- [] Agreement and policies are accepted explicitly.
- [] Server validates price and payment signature.
- [] Invoice, receipt and onboarding are created after verification.

SEO, performance and trust

- [] Server source contains correct ITO Ads content and canonical.
- [] Page is internally linked and Search Console inspection passes.
- [] Performance budget is met on mobile.
- [] Case studies and testimonials are genuine and approved.
- [] Brand, legal identity and contact details are consistent.

SECTION 21

21. Final management conclusion

The exact order for turning ITO Ads into a sales-generating system

A reliable page with a working form will outperform a beautiful page that cannot capture a prospect.

The existing visual direction may be retained in a lighter, safer form. The business priority is to rebuild the page around the complete revenue journey: visitor clarity, proof, capture, qualification, CRM assignment, rapid response, consultation, proposal and verified payment.

Final order of priority

1. Reliability.
2. Lead capture.
3. CRM routing.
4. Attribution and tracking.
5. Offer clarity and proof.
6. Sales follow-up discipline.
7. Payment and onboarding.
8. Animation and decorative enhancement.

FINAL DIRECTIVE

Do not call the page 10/10 and do not restart material paid traffic until the Priority 0 defects are implemented and the complete lead-to-CRM-to-sales flow passes testing. The 10/10 rating must be earned through reliable operation and verified conversion data.

P0

STOP LOSS

Reliability, form, CRM, tracking, performance

P1

BUILD TRUST

Proof, pricing, identity, policies, payment

P2

OPTIMIZE

Testing based on qualified leads and sales
